

Resident

Ghost Lights Press Release.

Fast-growing New Zealand design house Resident is set to release its first lighting pieces in over three years: the aptly named Ghost Lights. Made in the same way test tubes are manufactured, the two glass tubes comprising the Ghost Lights are highly transparent, scratch-resistant, and of very high optical quality. The Ghost Lights, which come as both a pendant light and floor lamp, affirm Resident's ability to advance innovation in lighting design. Designed by the in-house team, Resident Studio, the Ghost Lights are a collaboration between technology and materiality. A warm LED light source projects invisibly through two pure borosilicate glass tubes to delicately illuminate the bottom edges of the glass. The result is a minimal form with an unexpectedly strong showering of light.
